Aspirin-C

Instructions for use: information for users

Aspirin-C is an effervescent tablet with 400 mg acetylsalicylic acid and 240 mg ascorbic acid

Please read the entire patient information leaflet carefully as it contains important information on using the medicine.

This medicine is available on a non-prescription basis. To achieve the best possible therapeutic results, you must follow the instructions in this patient information leaflet. If you have any further questions or need advice, please consult your pharmacist.

1. WHAT IS ASPIRIN-C AND WHAT IS IT USED FOR?

Aspirin-C has analgesic, anti-inflammatory and antithrombotic properties (nonsteroidal anti-inflammatory (analgesic)). Aspirin-C is indicated for:

- Mild to moderate pain such as headache, dental pain, menstrual pain and symptoms associated with colds (e.g., sore throat, ache, chills lining)

2. Dosing

Please note the instructions for adolescent (see section 2.2 " Children - Adolescents")

2.2. Children - Adolescents

Aspirin-C must not be used:

- If you are hypersensitive (anaphylaxis) to acetylsalicylic acid, other salicylates, acetic acid or any of the other ingredients of Aspirin-C.
- If you have a history of reactivity to aspirin-like drugs against pain, fever or inflammation (salicylates or other nonsteroidal anti-inflammatory (analgesic) drugs) with asthma attacks or the like.
- If you have acute gastric or duodenal ulcers.
- If you have a pathologically increased tendency to bleed.
- If you have liver or kidney failure.
- If you have severe, non-stabilized heart failure (cardiac insufficiency).
- If you are currently taking 15 mg or more metoclopramide per week.
- If you are a breast-fed mother of pregnancy.
